REPORT OF AERIAL DETECTION SURVEY

AREA SURVEYED: Tuskegee N.F.

STATE: Alabama COUNTY: Macon

ACREAGE WITHIN SURVEY BOUNDARY: 15,622 DATE: July 22, 1976

AIRCRAFT: Cessna, 182 SURVEY CREW: L.E. Drake and T.J. Rogers

SURVEY OBJECTIVES: To detect significant bark beetle activity with emphasis on the southern pine beetle.

SUMMARY: Only scattered single and small multiple-tree spots were observed. Several multiple-tree spots resembled southern pine beetle infestations from the air, but could not be checked on the ground due to a time factor. These spots will be ground checked at a later date to determine the agent responsible for tree mortality. A biological evaluation will be made at that time, if necessary.
